Swine (26 to 121 kg) Finishing

Guidelines For Estimating
Swine (26 to 121 kg) Finishing Costs
Based On Marketing 11,376 Pigs

Date: April, 2023

This guide is designed to provide you with planning information and a format for calculating costs of production of a swine finishing 26 to 121 kg enterprise in Manitoba. This type of operation is intended to represent the third stage of a three stage pork system. General Manitoba Agriculture recommendations are assumed in using feed and veterinary inputs. These figures provide an economic evaluation of the livestock and estimated prices required to cover all costs. Costs include labour, investment and depreciation, but do not include management costs, nor do they necessarily represent the average cost of production in Manitoba.

These budgets may be adjusted by putting in your own figures. As a producer you are encouraged to calculate your own costs of production. The assumptions on which the costs are based are outlined in the supporting pages. These assumptions were arrived at using the breeding stock, management practices, and facilities seen in modern, well managed swine operations of comparable size in Manitoba. Productivity and performance assumptions are based on information collected by department specialists, feed companies and other organizations. Where individual herd productivity and performance levels differ from those listed, adjustments will be required.

This tool is available as an Excel worksheet at:

[The Farm Machinery Custom and Rental Rate Guide](#) is also available to help determine machinery costs.

Swine (26 to 121 kg) Finishing Cost of Production

The following 26 to 121 kg budget is based on the assumption that all feed is purchased or home-mixed. The budget includes a land investment cost for 40 acres, with 0 acres rented out at \$60 per acre, of the estimated 232 to 358 acres of total landbase that would be required for this size of livestock operation. This land base falls within the 2XP2O5 application rate, soil phosphorus levels permitting.

The budget includes an assumption that 1.5% of the market pigs are sold as lightweight pigs. It is assumed that when light weight pigs are sold, they will have a salvage value. Therefore, total marketings are reduced by 2.44% to compensate for the lightweight pigs.

The budget includes an assumption that this particular operation is "all-in, all-out" by room. Space allocations for finishing pigs are in accordance with Recommended Code of Practice for the Care and Handling of Farm Animals: Pigs.

The rations illustrated in this budget are examples only. Individual farm conditions should be taken into account when formulating the diets. Producers need to know the feed intakes of their animals. Please consult with a nutritionist for diet information suggestions.

The Manitoba pork production industry profile is changing and this budget was specifically designed to address the need of producers who may want to analyze the cost of starting up or switching to a finishing 26 to 121 kg operation. Several companies are offering contracts with varying levels of guarantees. Producers need to accurately calculate their costs before they can properly make a decision.
