
DO IT RIGHT!

Keep pests out

Pest control

Pests such as rodents, birds or insects can contaminate your products and cause your operation to be shut down.

DO IT RIGHT!

Keep pests out

Pest control

Follow these simple suggestions to keep pests out of your premises.

- Seal any holes or cracks in the premises' exterior. Remember - rats need only a space the size of a quarter to enter buildings and mice can fit through an opening the size of a dime.
- Keep your doors closed at all times, and make sure weather stripping is in good shape.
- Install and inspect window screens for any holes or cracks.
- Remove standing water or garbage from your premises.
- Eliminate clutter. Old equipment and stacks of pallets provide homes for unwanted pests.
- Create a vegetation-free zone around your building to prevent pests from living near your premises.
- Screen or cap all vents and pipe openings.
