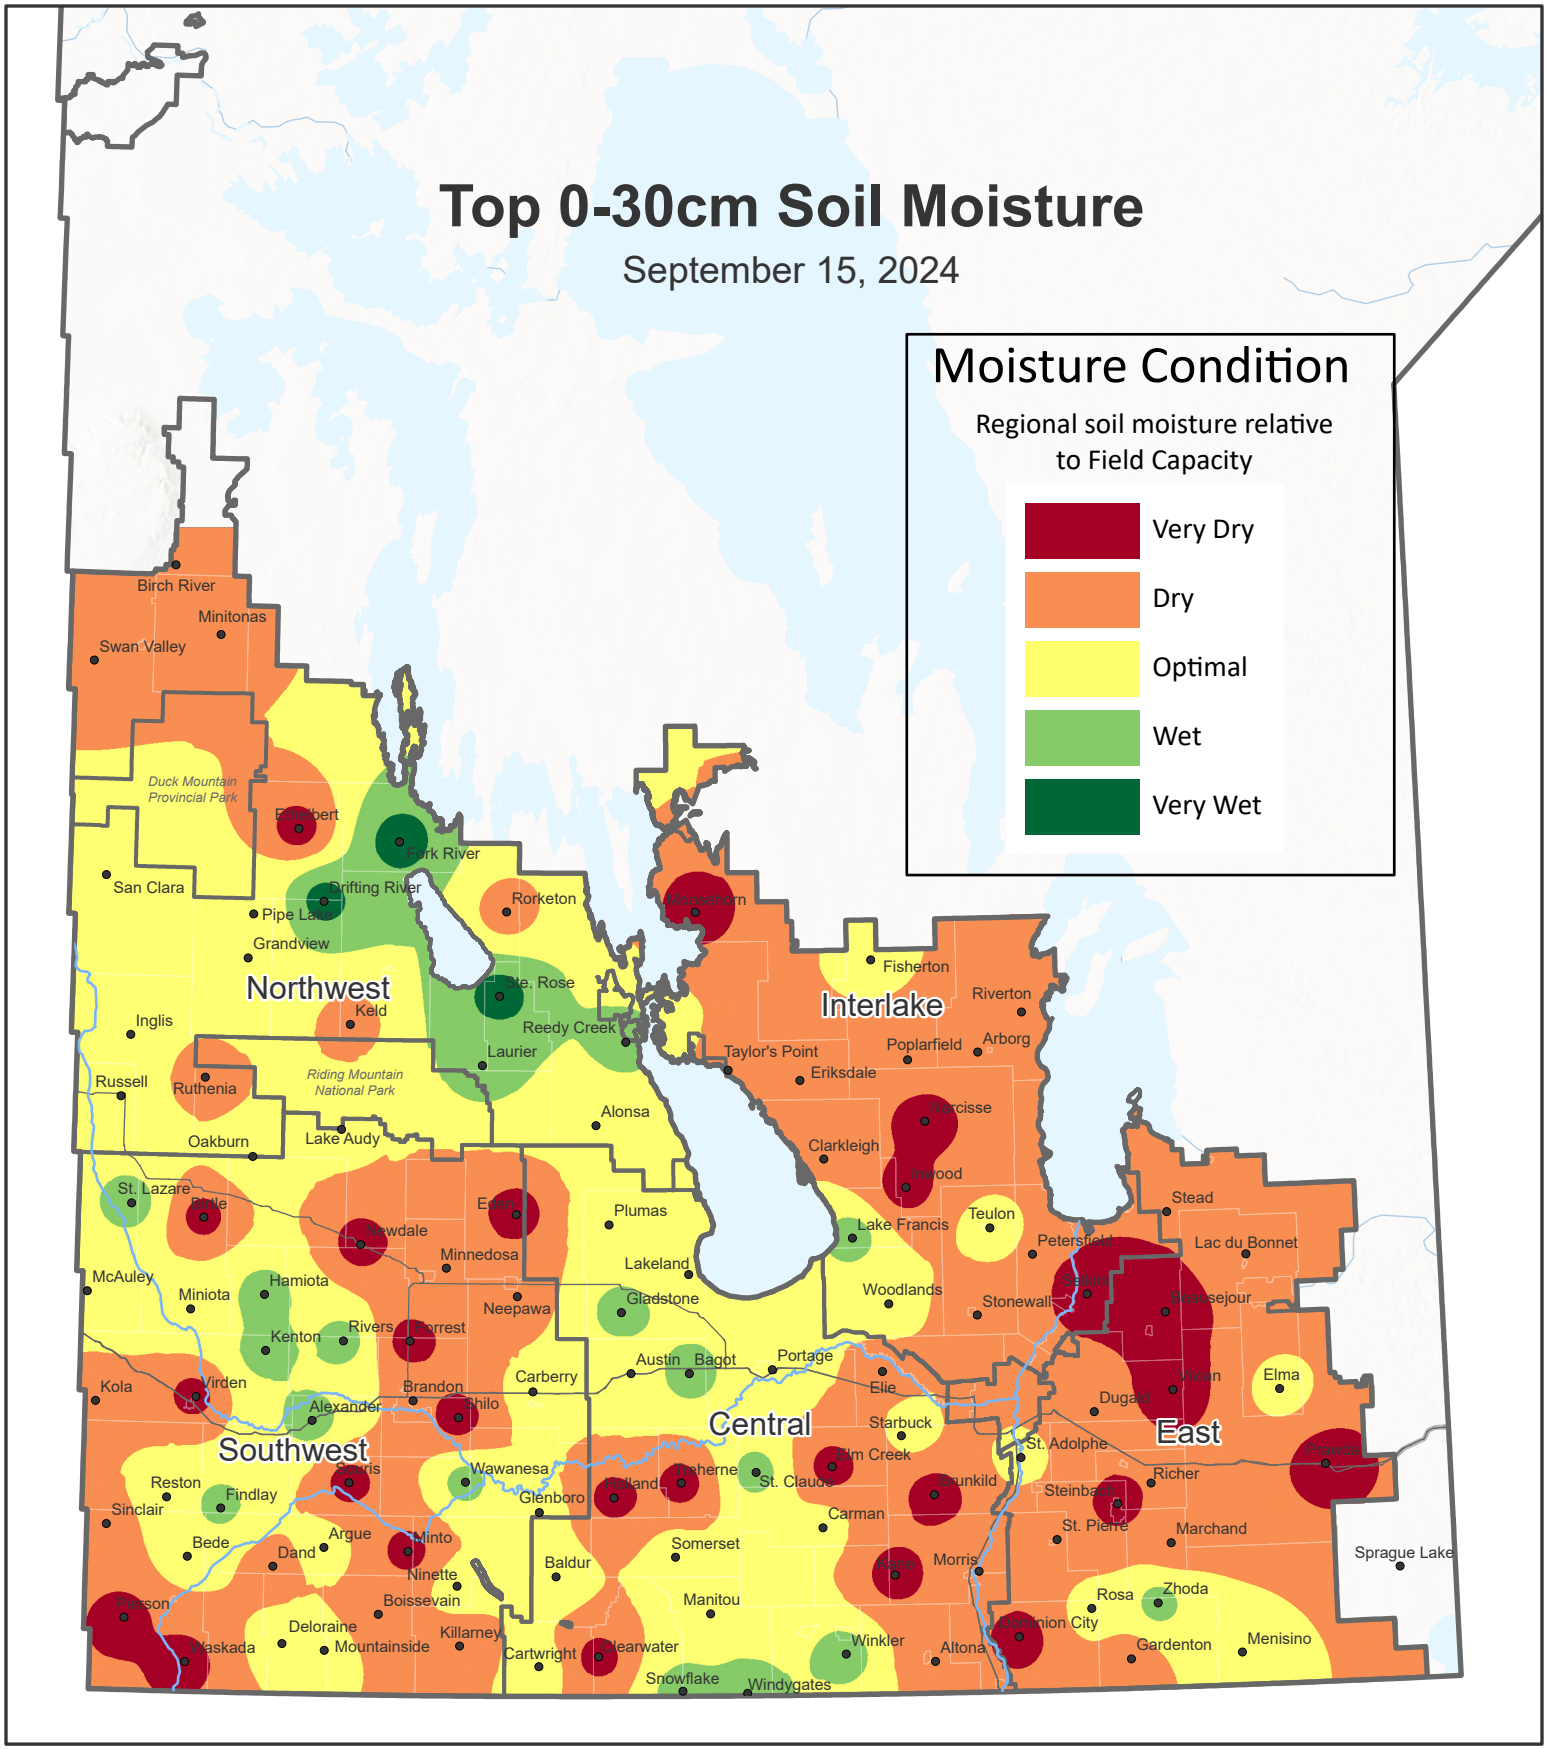
Top 0-30cm Soil Moisture

September 15, 2024



Prepared by Manitoba Agriculture Weather Program.

This map represents soil moisture values measured from automated instruments at sites across Manitoba.

Qualitative range (very dry to very wet) is based on the amount of current soil moisture relative to field capacity in the spring.

This is a regional estimation and should be supplemented by site-specific considerations for specific local areas, fields, and soils.

The accuracy of this map may vary due to data availability and potential data errors.

For more information, contact your local Manitoba Agriculture office.
