Platinum Pork Inc. TRC 12-054

R.M. Of Rhineland Question

Page 9 #5 (of the TRC Report) Identifies that they will require 26,202 gallons of water per day. Currently they are using only about 3000-5000 of water a day so even tripling production would only be 9000-15000 gallons per day. I am assuming that they are already using surface water. Do we know if their municipal water intake will increase and by how much?

Proponent Response

August 5, 2019

Our monthly water usage would be about 125,000 gal per month. The first 4 months of this year we were 100% on rural water and that is what we used. So if we double our average use would about 125,000 gal per month if we don't expand our pond.

August 20, 2019

We were on 100% pipeline water use the first quarter of the year, I think that is the first time ever that has happened. We normally use about 25% of our needs as pipeline water that is why we would use about 125,000 per month of pipeline water

Thanks
