Hello,

I am writing in regards to the proposed Hylife barn TRC 12-091
I received a letter as we (Dorian and John Olver) live just west of the site.

I am in support of this project. I think the job opportunities from construction and ongoing operations are positive for the community - supporting maintenance companies, feed mill and ultimately farmers in the area. The manure from the project will also improve fertility in the area and decrease the reliance on synthetic fertilizer. We currently have barns in almost every other direction of our yard and there are maximum 10 days a year we can smell manure so I really don't think it effects our property value or quality of life. We knew there were barns around when we purchased our yard and it really didn't factor into our decision. I am happy to see the community and agriculture benefit from economic development like this.

I know a lot of people have the opinion of "not in my backyard" when it comes to livestock operations like this. However, when I am at the grocery store buying meat, I am happier to buy Canadian grown product than importing from other countries. I know the standards of animal care are higher in Canada and regulations for waste management, water management, employee management, etc are being followed and are regulated - where in other countries, these things may not be a priority. If we want Canadian meat, we logically need livestock around and close to places where grain is readily available, and human resources are available. I support Canadian agriculture, therefore I am in support of this project.

I hope our elected council and the review committee makes their decision with the long-term growth of our community in mind.

Thank you
Dorian Olver

Hey, my name is Michael Peters and I am speaking on behalf of myself and my wife Brooke. We are both 100% in favour of this project going forward and are so excited to see progress in our municipality. We are currently running a mixed farm of cattle and grain. Our farm is located approximately 2 miles to the south west. Now growing up on a farm that lived a mile west of a barn I'm no stranger to a little piggy smell. But that has never been a problem and never will be in our family. My father used to say "smell that boys? That's the smell of money." Now I realize some of you may be wondering how that could be. Well honestly I feel it's all how you look at it. I'll break it down into a few positive ways pig barns have impacted myself and ways I see them helping our community.

- provide a reliable and cost effective way of receiving fertilizer for our crops.
- increase organic matter in our soil.
- added benefits of getting all kinds of nutrients (not just Nitrogen).
- we now have another competitive buyer for grain at the new feed mill.
- which brings more trucking jobs to our community not only with feed but also livestock.
- entry level jobs with good pay.
- opportunity to grow and have a career.
- all kinds of contractors get work from these as well. (Plumbers, electricians, carpenters, manure pumpers, lawn care, yard maintenance, accountants. The list goes on.

Now I realize you may think I'm biased and just want the manure. Myself and my farm gain nothing in manure from this project. But I feel our farming community and a community as a whole have much to gain with this going forward. Did I mention the tax revenue the government and municipality will collect off of this... it's mind boggling how short sighted people can be when apposing these projects. These are the investments and growth our community needs.

sincerely,
Michael and Brooke Peters

Winnipeg, MB R3G ON4

To whom it may concern.

This letter is in response to the request of Hylife-Crown Royal Nursery 2 (TRC-12-091) to establish a nursery pig operation at SE ¼ 33-03-16 WPM within the RM of Killarney-Turtle Mountain.

We strongly oppose this factory being established at the proposed location. We currently own 80 acres of land (SE ¼ 28-3-16) with our house being one mile south of the proposed factory and our property line being only half a mile. My husband and I purchased our farm over a decade ago to enjoy the space and health that country living provides. We have since welcomed three children into our family and take great pride in our home and surrounding land.

Not unlike many in our areas, we are baffled to imagine a government, municipal or provincial that would consider these types of concentrated animal feeding operations a viable and thoughtful response to job creation or an improved economy. These pig factories only ensure that foreign corporations profit once again on the back of rural communities. These global companies offer questionable economic returns in return for environmental degradation, risks to local aquifers, lakes and rivers and decreased property values.

Having reviewed the Site Assessment submitted by the applicant it cannot be determined if a complete and accurate environmental impact assessment has been conducted and reviewed. Limited information has been released but even that small amount of information raises red flags.

7.1 Water Requirements

The Site Assessment states that the water (implied as fresh water) required for the operation is estimated at a maximum of 19,800 Imperial gallons per day or 7,227,000 Imperial gallons per year. The operational need is proposed to be supplied by a nearby well (SE-33-3-16W). Given the well is on an aquifer that also supplies the nearby community well to the west, the town of Killarney and already operating farms and residents, what is the specific and science-based impact on the water availability for the area? I am concerned for the depletion and possible contamination of water sources despite promises of safeguarding environmental conditions.

11.0 Odour Control Measures

Hylife has actually stopped pretending to even try to reduce the highly offensive gases from spreading by omitting the manure storage cover from their list of preventative measures. This could be because they don't work, rip, blow off, etc and have had issues in the past with their promises otherwise. Polluting the air with the stench from this factory cannot be avoided with a 180,600 square foot uncovered lagoon. The Site Assessment did check off that they will have shelterbelt planting which is sounds promising in theory only. It will take decades to grow a decent shelterbelt and that is if all the environmental conditions are favorable. It won't be in my lifetime or yours that these proposed trees will actually decrease the smell from travelling when the winds blow. This pig factory reduces the quality of life for those in the vicinity causing windows to remain closed, and outdoor leisure time to be limited due to odor.

Any taxes gained will be promptly spent on gravelling and maintaining the roads. Our municipality will have a hard time arguing this point according to their books. Hylife will tear up the roads with their trucks every day, and although The Site Assessment may state that they will drive the provincial highway 253, chances are they won't when road restrictions are off. Undoubtedly, they will go straight south to the feed mill on 94W, passing the school bus that our children are on and dusting out anyone who dares to be on their pedal bikes, or trying to enjoy what was once our clean country air.

If this proposal was a neighbor trying to support a family and living in the same yard as the barn, we would be supportive and respect would be had. Instead the benefits of this factory are limited to the one individual who is selling the land and using the fertilizer for his land, the few people who will be hired to work at this automated hog factory and local farmers who sell their grain as feed to the already abundant number of hog barns in the area.

The negative consequences of foreign owned pig barn operations far outweigh any perceived economic benefit to a community. This company is pushing into our community to utilize our resources. The stench of the barns and associated pollution of fields and nearby waterways is detrimental to the lifestyle of the local tax paying citizens.

Lastly, this proposal is for a three-barn operation of 18,000 pigs with a large lagoon. It has not been overlooked that the size of the lagoon is decent and it would be hard not to speculate that in a few years there may well be an expansion thus causing more depletion of water resources and an increase in smell.

We are dreading the impending odour of this intended barn, as well as the other environmental impacts that will affect all of us in the area for miles. I wish prosperity to all, but it does appear that those of us who fall into the catchment area of this factory, now owned by non-Canadian investors get to pay the price.

Sincerely,

Trevor and Kendall Kinsey

Re: Proposed pig barn TRC 12-091

Dear Sir or Madam:

In my opinion there are enough pig barns right in this area and I am opposed to putting pig barn TRC 12-091 on the SE 1/4 33-3-16

I appreciate your notifying me by letter. Thank you.

Yours Truly

Loyal Frank.

Loyal Frank

Killarney M.B.

Good Afternoon,

I am emailing to oppose the proposed hog farm near Pleasant Valley. Residences have spent their hard earned money to save for a nature retreat away from congestion and pollution. Please reconsider the area in which your proposal is located. I understand the demand and need for pig farming but I am concerned that the smell and increase of traffic volume will drive down property values, enjoyment and visitors to the area. Therefore I hope this proposal will be discontinued.

Thank you for your consideration.

Brittany Ariss Ferris

March 28, 2022

Technical Review Coordination Unit
Municipal Relations
604-800 Portage Avenue
Winnipeg, Manitoba
R3G-0N4

To whom it may concern,

I'm writing this letter to express my concerns regarding the Hylife Crown Royal Nursery 2 pig operation within the RM of Killarney-Turtle Mountain. (TRC-12-091) I live 2.25 miles southwest of the proposed location. My main concern regarding this operation is future water sustainability. How does one know the long term effects of using 19,800 Imperial gallons of water daily? What course of action would be taken to rectify any problems for area residents who possibly face the threat of depleted water sources in the future?

Next, do we have the infrastructure to sustain more heavy truck traffic on the rural roads?

Lastly, I believe special consideration should be given to residents within one mile of these sites. The negative impacts, such as odour and decreasing property values are more of a real concern for these residents. Perhaps another suitable site could be sought out for this operation.

Sincerely,
Chris Strange

I have great concern to the proposed hog operation north of Killarney near Pleasant Valley.

It is my belief that an operation of this size and in such close proximity to Pelican Lake will be a huge detriment to the health of the lake.

Not to mention the increase in truck traffic on the local highways. We are not known for our good roads in this area already.

Surely there are more suitable locations for Hylife to locate another hog operation that is away from the water source of many tax payers.

Regards
Lea Todd

Hi there, I am emailing you today to oppose the hog barn. I am a regular visitor of Pleasant Valley and I have concerns about the idea of a hog barn so close to the area. I know I will not enjoy the smell and I have empathy for those who own cottages and homes there. Another concern would be the additional traffic. Pleasant Valley is a beautiful, quiet place where I visit to enjoy fresh air and peace. I think that if there were a hog barn near by, those luxuries would no longer be enjoyable. Thank you for taking the time to allow me to voice my concerns and I am hoping the plan for the hog barn will be discontinued.

Sincerely,
Taralyn Skrabek

I would like to make my opposition to this hog barn known. I have a home in pleasant valley and already have to deal with odors of existing barns, another project in this area will only amplify the odor issues making my property less enjoyable and could affect the valuation.
The large truck traffic is another concern, #253 & # 5 have already been wrecked by large trucks and this will only make it worse.
There are always promises made ahead of projects like this, they will stick to designated routes, deal with odors, make sure there's no contamination of water or land, but once built they are not lived up to and we are left with no recourse.
Thanks for the opportunity to voice my concerns. I hope this project is stopped.
Paul McLeod

I am concerned about the pig barns being proposed west of Pleasant Valley on HWY 253 . The proposed barns are at the top of a ravine leading down to Pelican Lake. Extra heaven trucks on 253 that is barely standing up to the traffic now . We already have pig barns south of Pleasant Valley the smell in summer south wind are gross so we do not need pig barns west of us. We live here year round

The proposed site for this new barn is way to close to Killarney, and as a manitoba highway employee, it is on a b level road that can not sustain heavy truck on a daily basis. I have 15 years in the hog industry before moving to the province, im not against barns, just not in this location, hilife is also no longer canadian owned, and does not sell pork to canadian markets anymore, to my knowledge, so i vote no

I am opposed to the proposed pig operation by Hylife Crown Royal Nursery 2 TRC 12-091.

The proposed location of this hog operation is in very close proximity to the Pembina River Watershed. The manure produced by this operation will have a negative impact to the Pembina River Watershed in particular this will be a substantial negative impact to the lakes downstream of this operation such as Pelican and Rock Lakes.

It is extremely obvious in the "Proposed Site – Spread Field Map" that during Spring run off and heavy rain storms that large amounts of manure will be carried into the Pembina River and into Pelican and Rock Lake. These lakes have suffered substantial issues with Algae Blooms due to high nutrient content in agricultural runoff. This has resulted in multiple fish kills and recreational closures of the lakes.

Massive efforts have been made in the Pembina River watershed to reduce the algae blooms in its lakes. The proposed hog barn undermines these efforts and will result in an additional and substantial source of pollution for these lakes. There will be very negative economic impacts to the communities surrounding these lakes if decisions are not made to reduce and prevent pollution such as manure from entering into the watershed.

Hylife Ltd. Has the financial means to build profitable operations of this type in locations that are much more isolated from Manitoba's lakes, streams and rivers. This is a very poor location for Hylife to develop due to its close proximity to the Pembina River watershed.

Please reject Hylife Crown Royal Nursery 2 proposal TRC 12-091.

Our children should not have to swim in a lake polluted with manure from industrial farm operations.

Regards,

Billie Jo Shewfelt

To whom it may concern,
RE: TRC 12-091 Pig Barn on SE ¼ 33-03-16 WPM
This proposal from Hylife for a 18,000 weanling pig barn operation should be **declined!**
There was way too many in the area already and many went through without approval!
Some in the area were to build new ones and decommission old barns, but instead the old barns were fixed up and are still being used.
And this one is way too close to water sources!
Please do not let this approval go through!

Good Afternoon

I would like to add my opinion to the proposed hog barn at SE 1/4 33-03-16 WPM.

I am STRONGLY opposed to the development of yet another hog barn in this municipality and more so in this area.

I live on SE 36-3-16 , 3 miles straight west of the proposed site. I already have a large barn one mile straight south of my home, and another a half mile south of that barn. There are days here when we are held hostage in our house because the smell is so strong, we can't go out. I was raised on a farm with livestock, so I am no stranger to the odors of farming. This however is an odor on an unprecedented level, and being outside is not possible. I would not wish that on any of my neighbours, or anyone for that matter. The proposed barn would impact many of my neighbours in that way.

Furthermore, within a 5 mile radius of this proposed site, there are currently 5 sites which contain 14 barns!!! Some of these barns are actually only within 3 miles of the proposed site. The Pembina river is within a mile to a mile and a half north of the proposed site, and a community well is only a mile away. I strongly disagree with adding yet another barn to this area as we are already saturated.

Thank you for your time

Technical Review Committee,
RE: TRC 12-091

We are full time residents of Pleasant Valley, we chose this area for all it has to offer in it's quality of rural lifestyle. As there are over 100 properties in this valley there needs to be some consideration given to the year round air quality in the valley and surrounding area. It is my understanding that there is an existing hog farm along highway 253 (size unknown to us) in close proximity to the proposed new hog farm, 18,000 animals. The air shed seems to have absorbed the odor from the existing farm, our concern is that the air shed may not be able to absorb the odor from a second large size hog farm.

If the construction of this farm was permitted, there is a large potential to impact:

- the air quality in the area,
- the health of area residents,
- the enjoyment of our properties,
- the enjoyment of the lake, used by residents and many non residents,
- the enjoyment of the golf course,
- the enjoyment of the RV Park
- the enjoyment of Moon Light Canopies
- the market values of our properties,
- highway 253 is in a very deteriorated state of repair and can not support any additional heavy transport truck traffic, without extensive reconstruction.

As there are potentially many other more suitable locations for such a farm, we request that the applicants look for a more suitable location. For the record we are strongly opposed to this development proposal.

I am Brian Munroe and live in Ninette Manitoba on Pelican Lake. I support the Healthy Lake Committee and have been a past member of the Pelican Lake Enhancement Committee.

I do not support any development which could even remotely have run off, seepage or any secondary pollution due to development, or investigation for development of any business that could remotely impact the watershed which may be connected to Pelican Lake.

A pig operation of any type is a clear hazard to Pelican Lake.

I am submitting my objection for the planned pig operation on SE 1/4 33-03-16 WPM

This operation is being built very close to the Pembina River which flows directly into Pelican Lake. This would have a huge negative impact on the river and lake quality. It would also subsequently have adverse side effects for the recreational area of Pelican Lake. I am opposed to this project proceeding at this location.

To whom it may concern,

I am writing this in protest of the proposed build of an additional barn by Hylife on the SE ¼ 33-03-16. I have lived at NE 11-04-16 almost the entirety of my life. I operate a small sustainable cattle farm and enjoy what the area has to offer. My concerns are primarily with the proximity to the Pembina River. This portion of the Pembina River is upstream of the weir that feeds the Pelican Lake inlet. There has been continuous efforts put in by many to improve the health of the lake over the last several years. Commercial pig operations have a history of injecting manure local area farm land. I have concerns with these injections making their way to our river and in turn our lake. Additionally, the highway that services this location is in poor condition at the best of times and does carry a low weight limit during spring road restrictions. Additional heavy truck traffic will only make this worse. The proposed site is many miles from the land owners own home, making inconveniences such as air pollution and damage to the local road for his neighbours and not him. I hope that these concerns will be considered when reviewing this proposal and I thank you for the consideration

Good day,

My name is Aubrey Yule, I live four miles east of the potential site of this Barn. I have a pregnant wife and a two-year-old daughter I would prefer if they built it further away from our house. There is currently a pig barn one mile southeast of my house and there is often a bad odour that is accompanied with bad air quality. I would like to maintain the air quality in and around my residence if possible, for mine and my family's sake.

Thank you,

Aubrey Yule

I would very much like to voice my absolute, iron clad opposition to the proposed hog barn at SE 1/4 33-03-16 WPM. In the RM of Turtle Mountain.
The proposed site is 3 miles away from my home, but I already deal with a 2 barns one mile south of my house. The odor from these barns is far too often, an unbearable, burn your eyes, choke on it, taste it kind of smell. I challenge ANYONE to come sit on my deck on those days. It is impossible. You cant sit outside or have a window open, at times the smell gets into the house even with them closed. I would not wish the smelly days on anyone. They are depressing really. You cant plan an event here in case the wind is from the south. We are already held captive by one putrid, unimaginably rank smelling hog barn we do not want another. There are no words strong enough to express my opposition to this hog barn. I implore those who can stop it to do so. We dont need one more barn in this municipality let alone this area.

Thank you for your time
Leona Beau

Hello it's Noilah oddleifson. We live on NE 21-3-16. The hog barn would be another awesome addition to the Killarney area. Both for jobs in the community and the use of manure for sustainable farming. %100 in favour of the build.

To: Livestock Technical Review Co-ordination Unit
Members: E.McCleery, P.Loro, C.Buczko, J.DiNella
Dept of Municipal Relations
Manitoba Government

Regarding the HyLife swine nursery barn proposal for SE33-3-16 W1 (they call it "Crown Royal" without license?)

1. Move site away from public highway as far as possible to reduce H₂S poisonings.

- Neurotoxic heavier than air hydrogen sulfide H₂S gas will be released from uncovered open pig excrement slurry pit close beside and above highway, and drawn into vehicles including school bus, or deep inhaled by cyclists, yet there is no continuous H₂S hazard monitoring adjacent to road nor electronic signage on highway, nor even a "warning, risk of H₂S, hold your breath" danger signage. This negligence to protect the public from neurotoxin seems merely to avoid cost of constructing a longer farm lane.

- References: <https://scholar.google.com> - search words: "pig swine sulphide" - science articles since 2018 - read several abstracts.

2. Do not store liquid pig excrement (manure) during summer, to reduce H₂S creation.

- Fermenting of anaerobic manure producing H₂S during hot long summer storage is wholly unnecessary, when land owners, having shared liability for H₂S poisoning on staff and public, ought to be banding the pig excrement under protective soil directly from barns every day when soil is dry. Farmers can easily responsibly band pig excrement into row crop corn until late summer, for example, or into a green cover crop which functions also to eliminate crop diseases and herbicide-resistant weeds during the fertility building summer. The excess sulfur in the excrement from which H₂S is produced, originates in both the avoidable imbalance of amino acids if excess sulfur-rich cheap distillers dry grains is used, and in sulfurous well water added during floor washing.

3. No conveyance of liquid excrement across the Pembina River valley.

- To prevent risk of pollution of Pelican Lake with phosphorus feeding neurotoxic cyanobacteria.
- There is no plan preventing eventual piercing or rupture of a liquid manure conveyance hoze, nor mention of yearly replacing of sensors and automatic shut-off valves such as if was a petroleum pipeline, nor are there mortgage caveats on the farm lands to provide funds for remediation when a

lake polluting event occurs.

4. Ultraviolet light sanitation of viruses in barn fan air.

- To each barn fan, add cyclones to first remove dust particles, then eg. biochar air filtration to lower polar and odorous and viral compounds, then UV treatment critical after sundown to eliminate all residual viable virus aerosols.

- Pathogenic virus aerosols, such as the 1918 swine flu pandemic of swine and humans, are now fan exhausted all night with no sanitizing UV exposure from sunlight, thus contagion risk from swine is now very much higher than in 1918, inhaled by all within each passing vehicle on Hwy 253, and into open windows of bedrooms in Killarney. If the pig odour can be smelled, then the drift carrying it can also contain pathogenic viruses during darkness.

- References: <https://scholar.google.com> - search words: "swine pig virus aerosol" - science articles since 2018.

5. Enable workers' self protection by democracy.

- Implement annual democratic secret preference-ranked ballot election by all workers, of the chief operating officer, due to this proposal for a H₂S neurotoxin producing, and risk of pathogenic virus propagating, facility having insufficient provisions for worker and public protection from these hazards. Similar to Kremlin, failure to protect persons from predictable harm possibly indicates leadership/ownership as incompetent or unempathetic.

- This is not a local worker-controlled business self-motivated to protect workers and residents from neurotoxic H₂S and epidemic viruses, in a province and municipality who have knowingly ignored public health science for 17 years. Need for immigration sourced staffing confirms the jobs are sub-Canadian desirability, and suspect for safety deficiency given standards may be lower where immigrants sourced from, and due to the indentured dependency of immigrant staff and consequent inability to speak up to insist on own protection from all potential hazards.

- Given that science-known neurotoxins and viruses are possibly present outside of barns when downwind from fans and slurry pit, workers must always arrive and leave site in fully enclosed vehicles with recirculated air, and never work outside wherever odour is present, given neurotoxins and viruses might lurk within odour.

6. Document trade mark license agreement if any obtained by HyLife for use of "Crown Royal" trade mark, or immediately cease usage due to destruction of a long established Manitoba product brand by negative association.

- All other sites operated by the company ought similarly be renamed with honesty such as this one to be renamed as "HyLife Swine Nursery SE33-3-16 W1", to avoid negative impact on products of other industries, of negatively impacting the marketings and profit paid to our government of our public-owned Manitoba Liquor Marts, of image communities or of family farm names, by association with vile odors and neurotoxin production, and to end using suggestive names possibly to psychologically masquerade vile odour as though it is lovely bouquet, misleading the public about possible aerosolized pathogens and the toxic gases emitted.

I have received direct high quality testimony from a member of the public who this past fall experienced neurological impact of confusion and dizziness from hydrogen sulfide originating from a swine manure storage from swine fed by HyLife's feed mill, at much greater distance that this proposed facility is to be from public highway #253 in Manitoba.

Minister of Municipal Relations has been fully aware of H₂S poison emitted from swine manure storages since my challenge of a ByLaw of Killarney's back in 2016, yet no corrective action yet.

From Ralph and Linda Shewfelt

[REDACTED]
Portage la Prairie, Manitoba

We have owned a cottage on Pelican lake Manitoba for approaching 50 years. We hope to pass the cottage on to our son who will perhaps pass it on to his son. Our grandson [7 years old] loves being at the lake and enjoying the water. Over the years many efforts have been made to try to improve the quality of the lake water. At the same time there have been occurrences that dramatically decreased the quality of the lake. Overflows from the municipal lagoon, drainage tile being installed in fields that drain into the lake and the ongoing constant clearing of any existing bush adjacent to the lake all cause deterioration in the quality of the lake water to the point where it is sometimes a danger to a person's health and well being to be exposed to the lake water.

The proposal for a large hog barn and disposal of the subsequent waste is very near the Pembina river water shed. The Pembina river is used to add water to Pelican lake to bring it to a normal level. This water is added to the lake when the Pembina river is running at a high level, i.e. during spring melt and run off season. That is the time of year when nutrients from the disposal of pig waste is likely to get into the Pembina river. Please relocate this proposed operation to a location where there is absolutely no danger of it deteriorating our water resources any more than they already are.

My name is Aaron Jeske. My family has a cabin at Pelican Lake and have been pleased to see the work that the community has been doing to protect and preserve this resource. I would be happy to support more efforts in this regard.

Subsequently, **the proposed "pig operation" (TRC 12-091) should not be allowed** so close to a waterway that is connected to Pelican Lake.

I would be extremely disappointed to see this build carried forward.

Sincerely,
Aaron Jeske
